

Pembina Pipeline Corporation Plan to Comply with Fox Creek to Namao Pipeline Expansion Project Hearing Decision 2016 ABAER 004

The following is Pembina's plan related to meeting the requirements of Condition No. 10 (the "Condition 10 Final Plan") in Alberta Energy Regulator ("AER") Decision 2016 ABAER 004 ("Condition 10").

Background

In accordance with the expressed requirements of Condition 10, Pembina requested the assistance of the Driftpile First Nation ("DFN") in identifying at least one site on the Fox Creek to Namao Pipeline Expansion Project (the "Project") right-of-way to be assessed as specifically required in Condition 10. Pembina met with the DFN on numerous occasions during the course of developing the Condition 10 Final Plan and provided it to the DFN on October 3, 2016.

Scope of Study

As discussed in the Meeting, Pembina will commit to the study of three (3) sites on the Project right-of-way ("ROW") in the Green Area of the Project.

Site Selection Methodology

Site selection was informed by both the Supplemental Traditional Land Use Study for Driftpile First Nation: Fox Creek to Namao Expansion Project (September 25, 2015) (the "Supplemental TLU"); and site accessibility. The sites need to be easily accessible in all weather conditions with preference given to sites accessible by existing access.

The sites that met these criteria were identified in the Supplemental TLU as [containing plant species of traditional use] importance to the DFN community.

Study Period

Pembina will assess these sites through five (5) growing seasons, as required by Condition 10.

Plant Species

Pembina will work with the DFN community members to identify which of the plant species are of traditional use importance to DFN at the three (3) sites selected for assessment in accordance with Condition 10 (the "Selected Sites").

Moose Lick

Pembina recognizes the significance of moose licks to the DFN members, as expressed in the hearing and as identified in the Supplemental TLU and will work with DFN to monitor the mineral lick identified in their TLU study in coordination of the Condition 10 plan.

DFN Community Engagement

Site Selection and Planning

Pembina has made a request that the DFN community members, specifically Harvesters and Elders, be involved in reviewing and providing feedback on the Selected Sites and identifying plant species of importance to traditional use. Pembina has suggested a meeting be held in November 2016. Additionally, Pembina has offered and would like to host a DFN community open house. At the open house we would provide DFN members information on site selection, the Selected Sites, data gathering, and the assessment schedule. Pembina

suggests a DFN community open house be planned for November/December 2016, following the meeting with Harvesters and Elders.

Data Gathering and Sharing the Assessment

Pembina has committed to train six (6) and hire four (4) Aboriginal Environmental Trainees from DFN (“DFN Trainees”) to support the environmental work during construction of the Project. Assuming successful completion of the construction work experience, Pembina would like to offer the DFN Trainees the opportunity for casual employment, which would include supporting data gathering for the assessment of the Selected Sites and sharing the assessment at the DFN community open houses. Pembina would contract through Driftpile Enterprises Ltd. to hire the DFN Trainees.

Pembina would like to offer the DFN Trainees the opportunity for casual employment

Budget for DFN Participation

Pembina will provide funding to support DFN participation in the study:

Initial community meeting – Study Introduction

Annual budget over 5 years includes:

- o Consultation office participation,
- o Harvester and/or Elder participation – (includes field participation, 3 trips/yr.),
- o Annual Community meetings – Presentation of Program results and;
- o Driftpile Environmental Trainees (4) work specific to Condition 10 – (includes field participation, 3 trips/yr.).

Schedule

Pembina proposes the following schedule:

- Early November 2016 - Pembina representatives to meet with Driftpile Harvesters and Elders to review and provide feedback in confirming the Selected Sites and identify plant species of importance to traditional use at those sites;
- November 2016 – Pembina representatives to host a DFN community meeting to provide information on the Selected Sites, data gathering, and the assessment schedule;
- Fall 2017* - Pembina to host an organizational meeting with Harvesters, Elders and DFN Trainees to review scope of work for data gathering, undertake data gathering and review and document the assessment results at the Selected Sites.
- Fall 2017* - Pembina to host a community meeting to present the results of the 2017 data gathering.
- In years 2018, 2019, 2020, and 2021, the same schedule for meeting with Harvester, Elders and DFN Trainees, undertaking data gathering, review and documenting the results at the Selected Sites and community meetings will occur in the fall of each of those years.

(*The assessment schedule will be dependent upon contractor completion of final clean-up. The program may be delayed by one year to commence in 2018 should final cleanup be delayed to the winter of 2017/2018.)
