Subject: WAG Email update

Hello folks!

Hope all is well and your winter has been good. Please find below updates regarding some of the 2017 plans for the Waterton Complex. If you have any questions or require more details, please feel free to contact me.

2017 Complex Turnaround

- We continue to move forward with our plans for the 2017 Plant and Field turnaround in May. Our plan is to shutdown in early May, conduct maintenance activities on the facility for the month and the restart in early June.

Well Enhancement and Interventions

- We are planning on doing a Coil Tubing operation and well stimulation on CA-6-17 in the Screw Driver Creek Valley this summer. Tentative schedule is June/July time frame.

Environment/Groundwater

- We have successfully installed six additional piezometers for ground water testing on properties directly east of the Waterton Complex as part of our ongoing Sulfolane groundwater monitoring program. Next step is to flow test them when weather conditions are acceptable later this spring.

Pipeline Inspections

- We will be doing our Russell Tool Lined Pipe Line inspections on the Carbondale pipeline system in the late April early May. We will also be continuing our ongoing inspections of various pipelines throughout the gathering system over the course of the year.
- We are currently planning on four to five pipeline inspection digs scheduled in the south field during the plant outage in May.

Development

- Shell submitted a well license application to the AER in mid-June 2016 for the WAT-78 well in the south field. We are currently working through a statement of concern on the proposed location. If resolution is achieved drilling may take place in 2018.
- We have plans to reactivate our WAT-61 and 10-7 wells in the Screw Driver Creek Valley with the installation of a new pipeline that will replace the abandoned one servicing those wells in the past.
- We will be moving forward with the installation of well site perimeter monitoring similar to that at the WAT-68 well site on five different sites in the Screw Driver Creek Valley.
- We continue to evaluate our development plans and we will update you as we move forward with these plans in future communications.

Reclamation

- We have received the reclamation certification on WAT-5 well site west of the Waterton Complex below Prairie Bluff along with WAT-21 well site and associated line heater and junction in Butcher Canyon. We will be moving forward with road reclamation to these sites starting with the access road to WAT-39 below Prairie Bluff in 2017. We will be working with stakeholders using some of our access roads that are listed for reclamation to ensure they are aware and have time make necessary alternative access plans.

- We will be moving forward with the WAT-68 lease interim reclamation in the Screw Driver Creek Valley

Abandonment

- Plans are in place to complete a downhole well abandonment at the CA-6-12 well site at the end of the 7 Gates road.

Social Investment

- We have some excellent opportunities to support our community in 2017 so remaining funds are limited for the year however applications can still be made with review scheduled on a quarterly basis.

General Information

- With the announcement of the Castle Parks Draft Plan Shell will be reviewing the impacts of the plan with respect to our existing infrastructure and will provide input.
- We are preparing to send out the Screw Driver Creek Air Monitoring Newsletter in the upcoming weeks.
- Waterton Advisory Group (WAG): We will be holding a WAG meeting this spring. We look forward to seeing you there. Stay tuned for confirmation on time, place and date.

If you know of neighbors or friends who are interested in receiving these updates, or if you would like to unsubscribe please get in touch with Rod Sinclair through email at rod.sinclair@shell.com or by phone at 403-627-7282. As always, if you have any questions, please do not hesitate to contact me. Talk to you soon.
